

30 April 1969

## OPERATIONS DIVISION PROCEDURAL NOTICE

### Standards for Allocation of Core Memory for Major IBM Computers

1. Effective 1 July 1969, programs to be executed by the OCS Computer Center on major IBM 360 computers using Operating System/360 will be limited to the following maximum allocations of core memory:

- a. Requirement Category C or D processing may be requested for programs requiring a maximum of 250,000 bytes of core memory.
- b. Requirement Category A, B, or E processing may be requested for programs requiring a maximum of 320,000 bytes of core memory.

2. All programs which currently exceed 320,000 bytes of core utilization will be reviewed by the Director of Computer Services. All new programs which are expected to exceed 320,000 bytes of core must be approved at the time of development by the Director of Computer Services. When approved, programs which exceed 320,000 bytes will be processed on a time available basis regardless of category unless (a) the processing required is in support of an Agency priority requirement and (b) the date and time needed is such that it must be done at a specific time. Prior arrangements for such processing must be made with Chief, Operations Division.
